

This file contains the output from running the Agentic Workflow to generate a comprehensive project plan for an Email Router product.

*** Workflow execution started ***

Task to complete in this workflow, workflow prompt =
'Put together a complete and thorough project plan for the product 'Email Router', including user stories, features and development tasks.'

Defining workflow steps from the workflow prompt

***** Executing step: *****

1. Generate user stories: create comprehensive user stories for the Email Router product with each user story containing a [persona], an action and desired outcome
[Router] Best agent: Product Manager (score=0.515)

Response from the Product Manager:

'As a Customer Support Representative, I want the Email Router system to automate responses to routine inquiries so that I can focus on addressing complex customer issues efficiently.'

As a Subject Matter Expert (SME), I want the Email Router system to intelligently route complex inquiries to me based on content analysis, ensuring that I receive only relevant and challenging tasks that require my expertise.

As an IT Administrator, I want the Email Router system to provide a comprehensive dashboard for monitoring system performance metrics, response times, and accuracy so that I can ensure the system is running smoothly and efficiently.

As a Customer Support Representative, I want the Email Router system to standardize responses to common inquiries to ensure consistent messaging and information delivery, enhancing customer satisfaction.

As a Subject Matter Expert (SME), I want the Email Router system to reduce the time spent on email triage by 70%, allowing me to reallocate my time to higher-value activities that require my specialized expertise.'

***** Executing step: *****

2. Define product features: create comprehensive product features for Email Router with Feature Name, Description, Key Functionality, and User Benefit
[Router] Best agent: Program Manager (score=0.418)

Response from the Program Manager:

'1. Feature Name: Email Integration

Description: This feature allows users to seamlessly integrate their email accounts with the Email Router application.

2. Feature Name: Email Notifications
Description: This feature enables users to receive real-time notifications for new emails and important updates.

User Benefit: Users can manage all their emails in one place, stay organized, and save time by easily accessing and sorting through their emails.
Key Functionality: Customizing notification settings, receiving push notifications on mobile devices, and setting up email alerts.

User Benefit: Users can stay informed and never miss important emails or updates, improving their responsiveness and productivity.

3. Feature Name: Email Scheduling

Description: This feature allows users to schedule emails to be sent at a later time or date.

Key Functionality: Setting up email delivery time, recurring email scheduling, and managing scheduled emails.

User Benefit: Users can plan and automate their email communication, ensuring timely delivery and better time management.

4. Feature Name: Email Tracking

Description: This feature provides users with insights on email open rates, click-through rates, and recipient engagement.

Key Functionality: Tracking email metrics, generating reports on email performance, and analyzing recipient behavior.

User Benefit: Users can evaluate the effectiveness of their email campaigns, make data-driven decisions, and improve their email engagement strategies.'

***** Executing step: *****

3. Define development tasks: create comprehensive engineering tasks corresponding to the user stories for Email Router with Task ID, Title, Description, Acceptance Criteria, Estimated Effort, and Dependencies

[Router] Best agent: Development Engineer (score=0.629)

Response from the Development Engineer:

'Task ID: 001

Title: Implement email routing functionality

Description: Develop the necessary backend logic to route incoming emails to the appropriate user's inbox based on predefined rules.

Acceptance Criteria: Incoming emails are correctly routed to the corresponding user's inbox according to the defined rules.

Estimated Effort: 5 days

Dependencies: Integration with email server API

Task ID: 002

Title: Create user interface for email routing rules

Description: Design and implement a user-friendly interface for users to define and manage email routing rules.

Acceptance Criteria: Users can easily create, edit, and delete email routing rules through the interface.

Estimated Effort: 3 days

Dependencies: Backend email routing functionality

Task ID: 003

Title: Implement email notification system

Description: Develop a notification system to alert users when new emails are routed to their inbox.

Acceptance Criteria: Users receive real-time notifications for incoming emails that have been routed to their inbox.

Estimated Effort: 2 days

Dependencies: Backend email routing functionality'

===== All Steps are successfully executed =====

*** CLEAN FINAL WORKFLOW OUTPUT ***

As a Customer Support Representative, I want the Email Router system to automate responses to routine inquiries so that I can focus on addressing complex customer issues efficiently.

As a Subject Matter Expert (SME), I want the Email Router system to intelligently route complex inquiries to me based on content analysis, ensuring that I receive only relevant and challenging tasks that require my expertise.

As an IT Administrator, I want the Email Router system to provide a comprehensive dashboard for monitoring system performance metrics, response times, and accuracy so that I can ensure the system is running smoothly and efficiently.

As a Customer Support Representative, I want the Email Router system to standardize responses to common inquiries to ensure consistent messaging and information delivery, enhancing customer satisfaction.

As a Subject Matter Expert (SME), I want the Email Router system to reduce the time spent on email triage by 70%, allowing me to reallocate my time to higher-value activities that require my specialized expertise.

1. Feature Name: Email Integration

Description: This feature allows users to seamlessly integrate their email accounts with the Email Router application.

Key Functionality: Syncing emails from multiple accounts, organizing emails into folders, and setting up email filters.

User Benefit: Users can manage all their emails in one place, stay organized, and save time by easily accessing and sorting through their emails.

2. Feature Name: Email Notification

Description: This feature enables users to receive real-time notifications for new emails and important updates.

Key Functionality: Customizing notification settings, receiving push notifications on mobile devices, and setting up email alerts.

User Benefit: Users can stay informed and never miss important emails or updates, improving their responsiveness and productivity.

3. Feature Name: Email Scheduling

Description: This feature allows users to schedule emails to be sent at a later time or date.

Key Functionality: Setting up email delivery time, recurring email scheduling, and managing scheduled emails.

User Benefit: Users can plan and automate their email communication, ensuring timely delivery and better time management.

4. Feature Name: Email Tracking

Description: This feature provides users with insights on email open rates, click-through rates, and recipient engagement.

Key Functionality: Tracking email metrics, generating reports on email performance, and analyzing recipient behavior.

User Benefit: Users can evaluate the effectiveness of their email campaigns, make data-driven decisions, and improve their email engagement strategies.

Task ID: 001

Title: Implement email routing functionality

Description: Develop the necessary backend logic to route incoming emails to the appropriate user's inbox based on predefined rules.

Acceptance Criteria: Incoming emails are correctly routed to the corresponding user's inbox according to the defined rules.

Estimated Effort: 5 days

Dependencies: Integration with email server API

Task ID: 002

Title: Create user interface for email routing rules

Description: Design and implement a user-friendly interface for users to define and manage email routing rules.

Acceptance Criteria: Users can easily create, edit, and delete email routing rules through the interface.

Estimated Effort: 3 days

Dependencies: Backend email routing functionality

Task ID: 003

Title: Implement email notification system

Description: Develop a notification system to alert users when new emails are routed to their inbox.

Acceptance Criteria: Users receive real-time notifications for incoming emails that have been routed to their inbox.

Estimated Effort: 2 days
